📄 package-lock.json	Update backend endpoints and fixes	2 weeks ago
📄 package.json	Update backend endpoints and fixes	2 weeks ago
📄 requirements.txt	Create requirements.txt	2 weeks ago

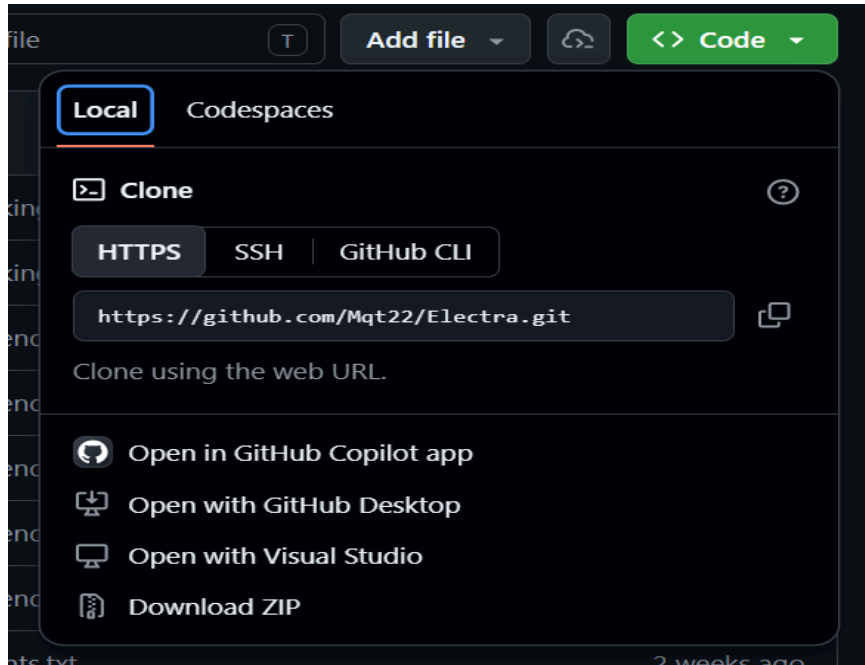

Download it or pull the latest code from this repo use the following commands:

```
git clone https://github.com/Mqt22/Electra
```

```
cd C:\Users\YourName\Desktop\Electra
```

```
git pull origin main
```

If you want to download the project directly:

Click directly on Download Zip

When Project is downloaded successfully you have to install mysql too watch this youtube video:

https://youtu.be/hiS_mWZmmI0?si=zO2HUfymiOA_UU5B

After mysql is installed

Install [Node.js](#) too:

https://youtu.be/DFfDYjVIRZw?si=IUAO_6xHm7gCD3oF

Install the requirements.txt by following command:

```
pip install -r requirements.txt
```

After installing run py create_table.py file it would create the table related to our site

Then run py [main.py](#) from Backend folder then from frontend folder run :

```
npm i
```

```
npm run dev
```

After this your project is setup you can login or signup as admin or customer
